Wozu das Ganze

Wozu das Ganze

- “Mein Code hat niemals bekannte Fehler, ...

... bevor der erste Kunde damit arbeitet!”

Damals ... Heute

Damals ... Heute

- Arbeit am offenen Herzen
- Wir Autodidakten haben das immer schon so gemacht
- “Ein Freund hat die Website für mich gemacht”
- Alternativen waren langsam, teuer und fehleranfällig
- Programmierfehler können teuer sein
- Kunden sind keine (guten) Tester
- Tests mit Echtdateien sind gefährlich
- Absichern der Datenbank ist schwierig

... aber das geht doch besser!

Das Setup

 **Development** — der natürliche Lebensraum der Entwickler:innen

- Daten, die wir als Entwickler:innen gewohnt sind
- Zugriff nur für das Entwickler-Team

 **Stage** — hier leben die Tester:innen

- Daten aus einem Kunden-Backup
- Zugriff für das Kunden-TestTeam/Power Users

 **Production** — Das Live-System der Kundin

- Echte Daten, echte Prozesse, echte Benutzer:innen
- Daten, die wir als Entwickler:innen gewohnt sind
- Zugriff nur für das Entwickler-Team
